

# soroban-react with stellar wallets kit

---

How to develop using a React project?

1. Make sure this library has the same react version as your react project
2. In this repo

```
bash run.sh # to work with the same docker image
yarn
yarn build
yarn link
```

3. In your react js project

```
yarn link soroban-react-stellar-wallets-kit
```

Once you have done some changes, do **yarn build** again.
